

Your patients are telling you something after every procedure. OrthoCompass makes sure you hear it.

Validated outcome data tracked from first consult through to final follow-up, across your entire musculoskeletal practice (arthroplasty, reconstruction, trauma, and beyond).

Independently maintained, so the burden stays with the system and the insight stays with you.

WHAT YOU CAN DO WITH IT

Know how your patients are doing	See where you stand	Build evidence that works for you
Patient-reported outcomes land in your dashboard within days of each consult, before, after, and at every follow-up timepoint. OrthoCompass is built around your whole practice, not a single subspecialty. As your clinical scope evolves across procedures and body regions, the platform moves with it.	Benchmark your outcomes against your own historical cohort and against peer contributors nationally through PROPELLER, from the day you start, not after years of accumulating your own data.	Your dataset is research-quality from day one. Use it for CPD, for conversations with colleagues or industry, for practice development, or as the foundation for publication, without waiting on project-specific ethics approval.

How it works in practice. EBM Analytics connects OrthoCompass to your practice management system, processes your appointment lists, manages patient contact, and conducts active chart review to catch clinical events that don't always make it into the notes. Your dashboard stays current without significantly adding to your workload.

What the system needs from your end is minimal but important: Access to your system, operative data entered at or close to the time of surgery, and practice staff who can prompt patients to check their phone for a follow-up link. Everything else is handled.

WHAT'S BEHIND IT

HREC-approved registry.	PROPELLER holds standing ethics approval. When a research question emerges from your data, you move straight to analysis (no project-specific approval, no delay).
Surgeon-led governance.	The PROPELLER Registry Advisory Panel comprises peer orthopaedic surgeons overseeing how the registry operates and how data is used.
Your data is protected.	Patient, provider, facility, and hardware identifiers are all pseudonymised within PROPELLER. Your practice data is never shared with any third party.
Your clinical independence is absolute.	No external party (sponsor or otherwise) has any role in your clinical decision-making. This is documented in your Participant Agreement.

HOW PARTICIPATION WORKS

Participation is available on a direct practice subscription. If industry sponsorship is available for your participation, EBM Analytics can handle all aspects of that arrangement (selection, documentation, MTAA compliance, and disclosure). **Talk to us about what applies to your situation.**
